#### PAROXETINE CONTROLLED RELEASE COMPOSITIONS

The present invention relates to a novel formulation containing paroxetine or a pharmaceutically acceptable salt thereof, and to its use in the treatment and/or prophylaxis of certain disorders.

US Patent No 4,007,196 describes *inter alia* a compound which is commonly known as paroxetine. This compound is a Selective Serotonin Reuptake Inhibitor (SSRI) and is currently marketed world-wide for the treatment and/or prophylaxis of depression.

The current formulation which is the only marketed formulation of paroxetine hydrochloride is a swallow tablet.

5

10

15

20

25

30

35

It has now been surprisingly found that controlled release and delayed release formulations containing paroxetine give rise to an unexpected reduction in the side effects associated with swallow tablets.

Accordingly, the present invention provides a controlled release or delayed release formulation containing paroxetine or a pharmaceutically acceptable salt thereof.

A further aspect of the invention provides a controlled release or delayed release formulation containing an SSRI. Examples of SSRIs other than paroxetine include fluoxetine (US Patent No. 4,314,081), fluvoxamine (US Patent No. 4,085,225), and sertraline (US Patent No. 4,536,518).

By controlled release is meant any formulation technique wherein release of the active substance from the dosage from is modified to occur at a slower rater than that from an immediate release product, such as a conventional swallow tablet or capsule.

By delayed release is meant any formulation technique wherein release of the active substance from the dosage form is modified to occur at a later time than that from a conventional immediate release product. The subsequent release of active substance from a delayed release formulation may also be controlled as defined above.

Examples of controlled release formulations which are suitable for incorporating paroxetine and other SSRIs are described in:

Sustained Release Medications, Chemical Technology Review No. 177. Ed. J.C. Johnson. Noyes Data Corporation 1980.

Controlled Drug Delivery, Fundamentals and Applications, 2nd Edition. Eds. J.R. Robinson, V.H.L. Lee. Mercel Dekkes Inc. New York 1987.

Examples of delayed release formulations which are suitable for incorporating paroxetine and other SSRIs are described in:

5

10

15

25

30

35

Remington's Pharmaceutical Sciences 16th Edition, Mack Publishing Company 1980, Ed. A. Osol.

Such controlled release formulations are preferably formulated in a manner such that release of active substance such as paroxetine is effected predominantly during the passage through the stomach and the small intestine, and delayed release formulations are preferably formulated such that release of active substance such as paroxetine is avoided in the stomach and is effected predominantly during passage through the small intestine

Said formulations are preferably formulated such that the release of the active substance is predominantly 1½ to 3 hours post ingestion.

The small intestine is suitably the duodenum, the ileum or the jejunem.

Patients who benefit most from the formulations of the present invention are those who are known to suffer from nausea upon oral administration using swallow tablets.

Preferred formulations are ultimately enteric coated tablets or caplets, wax or polymer coated tablets or caplets or time-release matrices, or combinations thereof.

Particularly preferred formulations are described in US Patent No. 5,102,666.

Thus, a particular aspect of the invention provides a polymeric controlled release composition comprising a reaction complex formed by the interaction of (1) a calcium polycarbophil component which is a water-swellable, but water insoluble, fibrous cross-linked carboxy-functional polymer, said polymer containing (a) a plurality of repeating units of which at least about 80% contain at least one carboxyl functionality, and (b) about 0.05 to about 1.5% cross-linking agent substantially free from polyalkenyl polyether, said percentages being based upon the weights of unpolymerised repeating unit and cross-linking agent, respectively, with (2) water, in the presence of an active agent selected from the group consisting of SSRIs such as paroxetine. The amount of calcium polycarbophil present is from about 0.1 to about 99% by weight, for example about 10%. The amount of active agent present is from about 0.0001 to about 65% by weight, for example between about 5 and 20%. The amount of water present is from about 5 to about 200% by weight, for example between about 5 and 10%. The interaction is carried out at a pH of between about 3 and about 10.

for example about 6 to 7. The calcium polycarbophil is originally present in the form of a calcium salt containing from about 5 to about 25% calcium.

Further particularly preferred formulations are described in US Patent No. 5,422,123.

Thus, a further particular aspect of the invention provides a system for the controlled release of an active substance which is an SSRI such as paroxetine. comprising (a) a deposit-core comprising an effective amount of the active substance and having defined geometric form, and (b) a support-platform applied to said deposit-core, wherein said deposit-core contains at least the active substance, and at least one member selected from the group consisting of (1) a polymeric material which swells on contact with water or aqueous liquids and a gellable polymeric material wherein the ratio of the said swellable polymeric material to said gellable polymeric material is in the range 1:9 to 9:1, and (2) a single polymeric material having both swelling and gelling properties, and wherein the support-platform is an elastic support, applied to said deposit-core so that it partially covers the surface of the deposit-core and follows changes due to hydration of the deposit-core and is slowly soluble and/or slowly gellable in aqueous fluids. The support-platform may comprise polymers such as hydroxypropylmethylcellulose, plasticizers such as a glyceride, binders such as polyvinylpyrrolidone, hydrophilic agents such as lactose and silica, and/or hydrophobic agents such as magnesium stearate and glycerides. The polymer(s) typically make up 30 to 90% by weight of the support-platform, for example about 35 to 40%. Plasticizer may make up at least 2% by weight of the supportplatform, for example about 15 to 20%. Binder(s), hydrophilic agent(s) and hydrophobic agent(s) typically total up to about 50% by weight of the supportplatform, for example about 40 to 50%.

Paroxetine used in the present invention is suitably in the form of the free base or a pharmaceutically acceptable salt thereof. Preferably, paroxetine is suitably in the form of the hydrochloride hemihydrate.

Paroxetine hydrochloride hemihydrate may be prepared according to the procedures generally outlined in US Patent 4,721,723..

Paroxetine in the form of a controlled release or delayed release formulation can be used to treat and prevent the following disorders:

35 Alcoholism - Anxiety

5

10

15

20

25

30

Depression

Obsessive Compulsive Disorder Panic Disorder

Chronic Pain

Obesity

5 Senile Dementia

Migraine

Bulimia

Anorexia

Social Phobia

10 Pre-Menstrual Syndrome (PMS)

**Adolescent Depression** 

Trichotillomania

Dysthymia

Substance Abuse

15

20

These disorders are herein after referred to as "the disorders".

The present invention provides a method of treating and/or preventing the disorders by administering an effective and/or a prophylactic amount of a controlled release or delayed release formulation containing paroxetine or a pharmaceutically acceptable salt thereof, to a sufferer in need thereof.

The present invention further provides the use of a controlled release or delayed release formulation containing paroxetine or a pharmaceutically acceptable salt thereof in the manufacture of a medicament, for treating and/or preventing the disorders.

The present invention also provides a pharmaceutical composition for use in the treatment and/or prevention of the disorders which comprises a controlled release or delayed release formulation containing paroxetine or a pharmaceutically acceptable salt thereof.

The following examples illustrate the present invention.

30

#### Example 1 (Hydrophilic Matrix)

	Intragranular	<u>% w/w</u>
	Paroxetine Hydrochloride	11.45
35	Methocel E5	1.25
	Lactose	12.3

	White Wax	10.0

#### Example 8 (Controlled release bilayer tablet)

#### **Active Layer**

5

	Component	mg/tablet	Function
	Paroxetine Hydrochloride	22.89*	Active
	Methocel K4M	15.00	Hydrogel polymer
	Lactose monohydrate	62.0	Hydrophilic agent
10	Polyvinylpyrrolidone	3.0	Binder
	Magnesium stearate	1.0	Hydrophobic agent
	Syloid 244	1.0	Hydrophilic agent

# Support platform

15

	Component	mg/tablet	Function
	Compritol 888	15.04	Plasticizer
	Lactose monohydrate	29.32	Hydrophilic agent
20	Polyvinylpyrrolidone	4.0	Binder
	Magnesium stearate	1.52	Hydrophobic agent
	Methocel E5	29.32	Hydrogel polymer
	Iron oxide	0.08	Colourant
25	Total tablet weight	184.89mg	

<sup>\*</sup>Equivalent to 20mg paroxetine as free base.

The powder blend for each layer was wet granulated in a high shear

mixer/granulator and dried in a fluid bed drier. The bilayer tablets were
compressed on a Manesty triple layer press.

Example 9 (Enteric coated calcium polycarbophil formulation)

#### Core

5	Component	mg/tablet	Function
	Paroxetine Hydrochloride	22.89*	Active
	Calcium polycarbophil	20.00	Matrix
	Lactose anhydrous	146.11	Hydrophilic agent/diluent
	Polyvinylpyrrolidone	10.0	Binder
10	Magnesium stearate	1.0 H	ydrophobic agent/lubricant
	Water**	0.024	Granulating liquid
			•

#### Enteric coat

15	Component	mg/tablet	Function
•	Eudragit	22.19	Polymer
	Talc	1.53	Lubricant
	Triethyl citrate	1.00	Plasticizer
20	Water**	. 24.6	Diluent
	Film coat		
	Opadry pink	10.5	Film coat
25	Water**	94.5	Diluent
	Polish coat		
	Opadry clear	0.750	
30	Water**	29.3	Diluent

<sup>\*</sup>Equivalent to 20mg paroxetine as free base.

<sup>\*\*</sup>Removed during processing.

<sup>35</sup> The core constituents were wet granulated in a high shear mixer/granulator, and dried in a fluid bed drier. The magnesium stearate was then added and the

mixture processed in a low shear mixer. The mix was then compressed on a B type rotary tablet press. Coating was carried out using an Accela cota.

Example 10 (Controlled release bilayer tablet)

5

#### **Active Layer**

Component	mg/tablet	Function
Paroxetine Hydrochloride	22.89*	Active
Methocel K4M	20.00	Hydrogel polymer
Lactose monohydrate	60.0	Hydrophilic agent
Polyvinylpyrrolidone	5.0	Binder
Magnesium stearate	1.0	Hydrophobic agent
Syloid 244	1.0	Hydrophilic agent

15

10

#### Support platform

	Component	mg/tablet	Function
20	Compritol 888	14.72	Plasticizer
	Lactose monohydrate	30.60	Hydrophilic agent
	Polyvinylpyrrolidone	2.80	Binder
	Magnesium stearate	0.80	Hydrophobic agent
	Methocel E5	30.60	Hydrogel polymer
25	Syloid 244	0.40	Hydrophilic agent
	Iron oxide	0.08	Colourant
	Total tablet weight	189.89mg	

<sup>30 \*</sup>Equivalent to 20mg paroxetine as free base.

The process was as described in Example 8.

#### Example 11 (Controlled release bilayer tablet)

#### **Active Layer**

5	Component	mg/tablet	Function	
	Paroxetine Hydrochloride	22.89*	Active

20	Water**	36.25	Diluent
	Total tablet weight	228.66mg	

<sup>\*</sup>Equivalent to 25mg paroxetine as free base.

The process was as described in Example 9.

<sup>25</sup> 

<sup>\*\*</sup>Removed during processing.

#### Example 13

#### GI tolerance study

The design of the study is outlined below

Subjects:

Normal healthy volunteers

Design:

Parallel group, placebo controlled, double blind

Treatment:

(a) Placebo, (b) Immediate release paroxetine, (c) Example

8 formulation, (d) Example 8 formulation with enteric

coating.

10 Dosage:

25

30 mg once daily for 3 days

Number of subjects: 452 evaluable (488 randomised, 485 evaluable)

The study was conducted to compare the incidence, severity and duration of nausea and vomiting, and diarrhoea (theoretically if the controlled release 15 formulations slow down absorption of paroxetine then, as paroxetine is known to be prokinetic to the GI tract there may be an increased incidence).

Adverse experiences (AE) information was assessed each morning at the time of dosing and again 24 hours following the last dose. Investigators and subjects 20 were given diary cards detailing how to classify severity of AEs in order to standardise as much as possible across all 6 centres.

Of the 485 evaluable subjects, 18 (3.7%) withdrew, 17 because of adverse events. Subjects with nausea/vomiting on the day of withdrawal were more common on (b) than either of (c) and (d).

The incidence of nausea/vomiting and diarrhoea is shown in the table below:

	<b>(b)</b>	(c)	(d)	Placebo
Incidence of nausea	59%	49%	39%	13%
Incidence of	15%	21%	20%	7%
diarrhoea				

30 The incidence of nausea was increased for both (b) and placebo compared to the expected rates of approximately 25% and 5% respectively for volunteers at these dosages for 3 days duration. The overall incidence of nausea was less on (c) and

(d) than on (b). The severity of nausea was also decreased as shown in the next table.

Nausea severity	<b>(b)</b>	(c)	(d)	Placebo
None	50 (41%)	63 (52%)	74 (61%)	104 (87%)
Mild	45 (37%)	40 (33%)	30 (25%)	16 (13%)
Moderate	21 (17%)	17 (14%)	15 (12%)	0 (0%)
Severe	6 (5%)	1 (1%)	3 (2%)	0 (0%)

5 Severity of diarrhoea is reported in the table below:

10

15

Severity of diarrhoea	(b)	(c)	(d)	Placebo
None	104 (85%)	95 (79%)	97 (80%)	112 (93%)
Mild	16 (13%)	16 (13%)	16 (13%)	8 (7%)
Moderate	1 (1%)	8 (7%)	9 (7%)	0 (0%)
Severe	1(1%)	2 (2%)	0 (0%)	0 (0%)

In conclusion, there appears to be a trend for (c) to reduce the incidence of nausea and the dropout rate due to adverse events in comparison to (b), but analysis of the results was complicated by a statistically significant treatment-by-centre difference. (d) shows a halving in the dropout rate and a fall in incidence of nausea of 20% (a proportional fall of 33%). In addition there is a reduction in severity of nausea of those individuals who report nausea on (c) and (d). There is an increase in incidence of diarrhoea on both of (c) and (d) in relation to (b), but this is confined to an increase in the number of individuals reporting moderate diarrhoea and there is no increase in those with severe diarrhoea.

#### Claims

1. A controlled release or delayed release formulation containing a selective serotonin reuptake inhibitor (SSRI).

5

15

20

- 2. A formulation according to claim 1 wherein the SSRI is paroxetine or a pharmaceutically acceptable salt thereof.
- 3. A formulation according to claim 1 or 2, which comprises enteric coated tablets or caplets, wax or polymer coated tablets or caplets or time-release matrices, or combinations thereof.
  - 4. A formulation according to any preceding claim, which is a polymeric controlled release composition comprising a reaction complex formed by the interaction of (1) a calcium polycarbophil component which is a water-swellable, but water insoluble, fibrous cross-linked carboxy-functional polymer, said polymer containing (a) a plurality of repeating units of which at least about 80% contain at least one carboxyl functionality, and (b) about 0.05 to about 1.5% cross-linking agent substantially free from polyalkenyl polyether, said percentages being based upon the weights of unpolymerised repeating unit and cross-linking agent, respectively, with (2) water, in the presence of an active agent selected from the group consisting of SSRIs.
- A formulation according to any one of claims 1 to 3, which is a system for 5. the controlled release of an active substance which is an SSRI, comprising (a) a 25 deposit-core comprising an effective amount of the active substance and having defined geometric form, and (b) a support-platform applied to said deposit-core. wherein said deposit-core contains at least the active substance, and at least one member selected from the group consisting of (1) a polymeric material which swells on contact with water or aqueous liquids and a gellable polymeric material 30 wherein the ratio of the said swellable polymeric material to said gellable polymeric material is in the range 1:9 to 9:1, and (2) a single polymeric material having both swelling and gelling properties, and wherein the support-platform is an elastic support, applied to said deposit-core so that it partially covers the surface of the deposit-core and follows changes due to hydration of the deposit-35 core and is slowly soluble and/or slowly gellable in aqueous fluids.

6. A method of treating and/or preventing the disorders by administering an effective and/or a prophylactic amount of a controlled release or delayed release formulation according to any preceding claim, to a sufferer in need thereof.

5

- 7. Use of a controlled release or delayed release formulation according to any one of claims 1 to 5 in the manufacture of a medicament, for treating and/or preventing the disorders.
- 10 8. A process for the preparation of a formulation according to any one of claims 1 to 5, which comprises combining the constituents thereof in the required proportions.

I' \*national application No.

PCT/EP 96/03252

Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)
This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
Claims Nos.:  because they relate to subject matter not required to be searched by this Authority, namely:  Remark: Although claim(s) 6  is(are) directed to a method of treatment of the human/animal body, the search has been carried out and based on the alleged effects of the compound/composition.
Claims Nost.:     because they relate to parts of the International Application that do not comply with the prescribed requirements to such because they relate to parts of the International Search can be carried out, specifically:     an extent that no meaningful International Search can be carried out, specifically:
3. Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)
This International Searching Authority found multiple inventions in this international application, as follows:
As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. As all searchable claims could be searches without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
Remark on Protest  The additional search fees were accompanied by the applicant's protest.  No protest accompanied the payment of additional search fees.
